

# MMIC Broadband VCO

## OEV8012

OEV8012 is a GaAs InGaP HBT MMIC broadband VCO chip, operating frequency of 8.0~12.5GHz. The oscillator integrates a negative resistance oscillator circuit, resonant circuit and varactor diode, while providing 1/2 harmonic frequency output. At +5V operating voltage, OEV8012 output power of 10dBm, the phase noise as low as -112dBc / Hz @ 100kHz, suitable for point-to-point communications, VSAT and other communications systems.

The chip uses on-chip through-hole metallization process to ensure a good grounding, do not need additional grounding measures, easy to use. The back of the chip was metallized, suitable for eutectic sintering or conductive adhesive bonding process.

### Limit parameters

Maximum operating voltage	5.5V
The maximum tuning voltage range	0V-24V
The maximum junction temperature	175 °C
Maximum storage temperature range	-65~+150 °C
Maximum operating temperature range	-55~+100 °C
Reflow soldering maximum temperature	245°C

### Electrical Specifications

Frequency Range(GHz)	8.0~12.5
Tuning voltage(V)	1.5~13.5
Output Power(dBm)	10
Phase Noise (dBc/Hz)	-70 ~ -66 fm=10KHz -96 ~ -92 fm=100KHz
Harmonic suppression (dBc)	-13
Clutter suppression (dBc)	-75
Input resistance (MΩ)	10
Output impedance(Ω)	50
Frequency temperature drift (MHz/°C)	1.1
DC voltage (V)	4.75-525
DC current (mA)	55
Antistatic ability (V)	500
Range of working temperature (°C)	-55 ~ +85
Storage temperature range ( °C)	-55 ~ +125
